

Why does a Computer needs a CPU?

Research about what happens if a Computer doesn't has CPU.

What actually CPU Performs?

How you can practically watch what CPU is performing by executing a sample program?

What is meant by the Speed of CPU?, What is that 3GHz, How can you feel it?

What is the one thing that changed the computers being like a calculator in olden days to speedy machines?

- Know about it & Take a sample program and go through the flow of it.
- Know how & who converts the instructions to binary.
- Know how does CPU can understand those binary instructions.

What are the main parts inside the CPU? Why they are needed?

- Know why there is need of Registers even RAM & Cache are exists.
- Know from where CPU will fetch the instructions.
- Know the actual reason why applications are slow.

Why does CPU has Cores?

- Does Cores execute Processes or Threads?
- Even if CPU is faster, why can't execute mulitple threads one after another?
