

Today's Concept is: RAM

Do not learn it like an exam topic.

Learn it like an engineer building a mental model.

Follow this exact structure:

1. Why was this concept invented?
2. What problem existed before it?
3. What would happen if this concept did not exist?
4. Build intuition using real-world analogies.
5. Explain the internal working step-by-step.
6. Explain all important components and why each component exists.
7. Show how this concept interacts with other computer science concepts.
8. Explain common misconceptions beginners have.
9. Give 5 deep "why" questions that force understanding.
10. Give 5 challenge questions for group discussion.
11. Give a complete flow diagram in text form.
12. Explain how this concept appears in real software systems.
13. Explain what an experienced engineer thinks about this concept that beginners usually miss.
14. Summarize the concept in 5-10 Lines.

Do not skip reasoning.

Do not focus on memorization.

Do not focus on interview preparation.

Focus on first-principles understanding and engineering maturity.
